

Eco House

Here is the Eco House I Have Built out of LEGO. It has many Environmentally friendly things: a windmill, which generates the houses electricity; an electric car, which reduces the use of Fossil Fuels; Solar Panels, which Harry has just finished installing, they use the sun's UV rays to charge up electricity; a recycling bin, which Mr Dursley is currently throwing an apple core into, is picked up every day and taken away to be recycled and finally they are planting trees- basically planting the world's best air vent- and waiting for them to grow.
